OLD PAGE

RapidWeaver theme

This time, we have faced a classic one, and created detailed graphics.

"Old Page" is a new sample in our trendy style graphics production. It is our way to do classics, with plenty of customization options, to please every taste.

This theme has extras! You can place icons (PNG or GIF) with a "logo" option to adapt an old style to YOUR old style! Lots of icons are available and some of them are customizable (with Photoshop or RW multitool), even if you have no graphics skills.

System Requirement: RapidWeaver 5 and above

Note to Installation Themes:
 A: Open Compress folder with Double click and open the theme folder
 B: Double click on the theme itself, as example your MultiThemes.rwtheme.
 C: Then you will find the theme in theme list in RapidWeaver (command + alt + t)
 C2: You can also install manually in: Your home/user > Library > Application Support > Rapidweaver
Note: If you want to modify the theme Make a backup copy of original theme or use "Duplicate your theme" option, available in the themes list.

Disclaimer: Our themes are carefully crafted and are made to reduce compatibility issues to a minimum.
Themes work flawlessly in:
Mac/Pc: Safari FireFox Chrome Opera are supported with themes features / Pc: Internet Explorer 8+ FireFox Chrome Opera / Support for iPad/tablets and iPhone/Smartphones

Compatibility specs: Once again, the compatibility of CSS files had to be limited to the most modern and frequently used browsers.
Being compatible with Internet Explorer 8 for Windows required the harder work. Multithemes structure view is correct with all browsers, though small details (like frame width or font size) may change with some of them. Such changes depend strictly upon the browser used, and do not affect the page structure or content readability.

This theme and jQuery: To preserve our themes' advanced functionalities, we name-spaced all the theme's internal javascript so that our latest –and compatible with the theme's– jQuery version is used without, hopefully, any conflict with any other jQuery declaration (i.e. jQuery from plugins, stacks, etc.). That will increase the theme compatibility virtually with any third party javascript library.
Finally, we set the theme's jQuery declaration to use Google CDNs to provide blazing fast loading times but with a gracefully degradation fallback call to the same library, locally, so that you will able to edit your theme even if not online.

CSS3, HTML5 and (guess who?) Internet Explorer: Internet Explorer doesn't support some CSS3 advanced features. We implemented those features with gracefully degradation in mind so that you will get it well rendered but with some minimal differences. IE9 and IE10 (beta) support is really high though.

Read before install: To use correctly this theme we suggested you to leave blank the option: consolidate CSS files (the only difference is the optimization of the published CSS file). You can find this option in the RW pref..

OLD PAGE 2.3 FEATURES

Latest upgrade: Responsive Layout, New WebFont, Social icon style, Enabled "Link to home" in the logo, Fixed issue in the BlockQuote color, code optimized.
Compatibility specs:Once again, the compatibility of CSS files had to be limited to the most modern and frequently used browsers. Being compatible with Internet Explorer 8 for Windows required the harder work. Multithemes structure view is correct with all browsers, though small details (like frame width or font size) may change with some of them. Such changes depend strictly upon the browser used, and do not affect the page structure or content readability.

Codes: JQuery library is included in this theme. The latest HTML5 and CSS3 standards.
CSS3 animation for each Built-in Page.

Responsive Options:

OldPage theme with Build in support for iPad / tablets / iPhone / Smartphone
This theme was planned to work from small phones to large screen.
The break point from classic layout to responsive layout is 900px. however every width comes with adjustments to improve the navigation.
Every Built-in Page of RapidWeaver has been improved and not only in the responsive version.

The responsive environment works well on all major browser on the Mac and Pc included Internet Explorer 9. We've added some extra instructions for each browser. We've added also some codes for Internet Explorer 8 if you need a compatibility with this old browser (in this case you must turn ON the "CSS consolidation files" in RW pref.).

Note: You must make a preview of your project to see the theme in responsive mode on your browser (resize the browser window to see the theme in action)
Moreover we suggest to use a real ipad/iphone device for your tests; in this case you must publish the entire project on the web.

Responsive layout: The theme is responsive from 240 (very small phones) to 900 pixel.

Expanded Toolbar: If this option is turned "On" the responsive version of the Toolbar navigation start with menu opened.

Responsive version of the Toolbar:
Due to the inline navigation design, there's 3 level of sub navigation per parent page.

Font Size: in this theme you can choose a different Size for large screen or smartphones. the font size is based on 16px

Intelligent text size:
Increase Text in SmartPhones: +20% text size, from 240px to 600px.

hide Logo: you can turn off the logo at 240px or 320px or 480px.

hide Sidebar Tile: you can turn off the title at 899x.

Responsive Image with intelligent altTAG: "image " (image + "space" if you have text in the altTAG)
You can enable, selectively, per each image where you'll need it, the "fluid" responsive behavior.
It means that the image will adapt in width (keeping its ratio with its height) to its content, by just adding the keyword "image " at the beginning of the alt text.
Note: If in preview mode your image looks pixelated, try either setting the scale to 100%, or use a larger version of the image; the right size depend on the theme layout.

You can enable, selectively, per each image where you'll need it, the "fluid" responsive behavior.
It means that the image will adapt in width (keeping its ratio with its height) to its content, by just adding the keyword "image " at the beginning of the alt text.
Note: If in preview mode your image looks pixelated, try either setting the scale to 100%, or use a larger version of the image; the right size depend on the theme layout.

White frame image: (used also with FLUID image Alt-Tag "image")
in this theme you can apply the white frame to any image.
To show correctly the frame in the responsive layout you must add right padding (in the stack)

Responsive Photo Album:
To show correctly the photo album RapidWeaver page set the thumbnails as the picture below.
Open the Option Panel and choose the second size.
This page is optimized for this thumbnails size because is quite good for small devices. If you don't need the responsive layout ignore this warning.

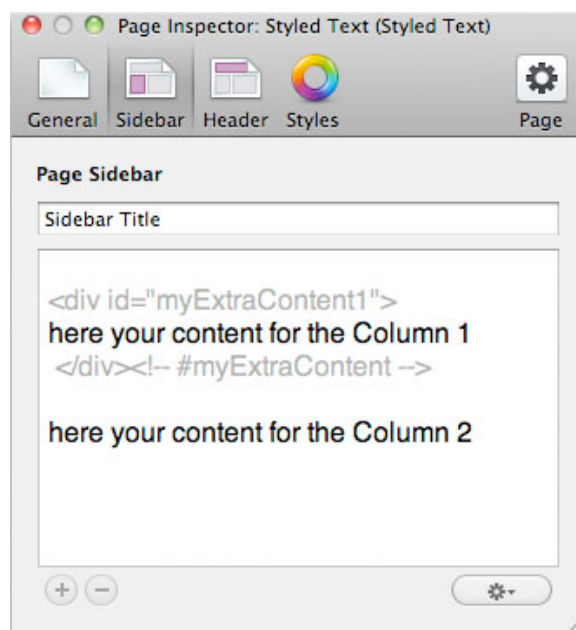

EXTRACONTENT:

1: Default usage without external plugin:
When you start with a new project you must put this code in the sidebar for the "extracontent1" (the first column). Default code (not used in stacks):

<div id="myExtraContent1">here your content for the Column 1</div><!-- #myExtraContent -->

**2: With Stack plugin (http://www.yourhead.com/stacks/) + Extracontent Stack**
If you use Stack Plugin as a default page you can use the Extracontent stack instead. The ExtraContent Stack allows you to drag your content into the ExtraContent area of your choice without the need for code. Simply add the ExtraContent Stack to your page, set the ExtraContent number in the HUD, then add your content inside it. Anything you add will appear in the designated ExtraContent area.
Drag the E- stack in your page and drag inside this stack your content.
in the stack panel you must choose the extracontent number.
in this theme 1=First sidebar, 2=Bottom page, 3=top page

Visit the ExtraContent website for more information or download the ExtraContent Stacks Plugin here.

Some info about Extracontent:
The Extracontent Option (1 fixed and 2 panels on/off) is an external free addition. ExtraContent came about when a handful of 3rd party developers got together to address the need for more content spaces in RapidWeaver. While the content area and sidebar are ample space for the vast majority of RapidWeaver users, there are some who want more flexibility to add content in ways keeping with todays modern web designs. To use Extracontent you may use some snippets, it is easy.

For further informations visit the ExtraContent site: http://extracontent.info/
and also the ExtraContent Google Group: http://groups.google.ca/group/extracontent
download stack + snippets from DeyDesign: https://github.com/downloads/seyDoggy/ExtraContent/ExtraContent-add-ons.zip

External tools for this theme:
We suggest also the great plugin PLUSKIT by http://www.loghound.com/
This plugin allow you to import stacks pages in another pages and/or in Extracontent.

Theme options

Styles: A graphics style with three variations and each variation has its own 4 versions! (total 15 skins)
• *Old Page:* classic and neutral "aged" style, with lines and graphics page options
• *Pentagramma:* hybrid music style, with stave and tuning-fork
• *Old Page and Tickets:* Colorful style, rich in details
You can edit both and footers with RWmultitool

JQuery library is included in this theme. The latest HTML5 and CSS3 standards. Build in support for iPad / tablets / iPhone / Smartphone

Colours Options: You can edit the text color.

Viewing Tab: showing the current page of your site. Options for Text aspect and Tab Background

Extracontent: 1 area available at the bottom of the page. You can choose 3 styles.

Photo Album: Classic album with new page style or with Slideshow through prettyphoto.

Font Size: 3 sizes available + extra size for smartphones

Logo: Logo with "home link" (Better size 200x65 pixel).

Editable Logo: You may modify the logos using Photoshop. You may modify other graphics using RWmultitool.

Title: Title text may be placed both on the right side and left side or centered.

Combo Options: miscellaneous options about structure and text features.

Sidebar: sidebar can be placed on the left side only; you may even hide it
This theme graphics setup allows a vertical toolbar on the left side. You may even hide it and leave the main page size (Content) unchanged.
Font: Georgia, Trebuchet MS, Lucida Grande, Helvetica.

WebFonts: 14 WebFonts for titles and classes + toolbar.
Select the WebFont in the Options Panel. Add the class before and after your text : <h1> Your text >/h1>
(available for: H6, h5, h4, h3, h2, h1)

Social icons: small size + big size + 2 button styles
in this theme you can show your favorite social link.
59 different icons styled as animated buttons/colors. Easy setup (read below).

Add your favorite social icon:

To create social links copy and paste the codes (below) into your project.

- Replace # with the url to the social network

- Note: You must apply the "Ignore Formatting" to the selected code.

The option is located in the RapidWeaver toolbar: "Format / Ignore Formatting".

You can paste the code in the Page, in the sidebar and also in the ExtraContent.

`<span class="social"><a href="#">F</a></span>`

is the URL and F is the social icon; in this case F = Facebook
